00:00

Welcome to The Explainer.

00:00

00:01

Today we're breaking down the INTI-ATI method

00:03

to see how C-Trader execution works for beginners.

00:06

This INTI-I system promises to completely demystify

00:06

00:11

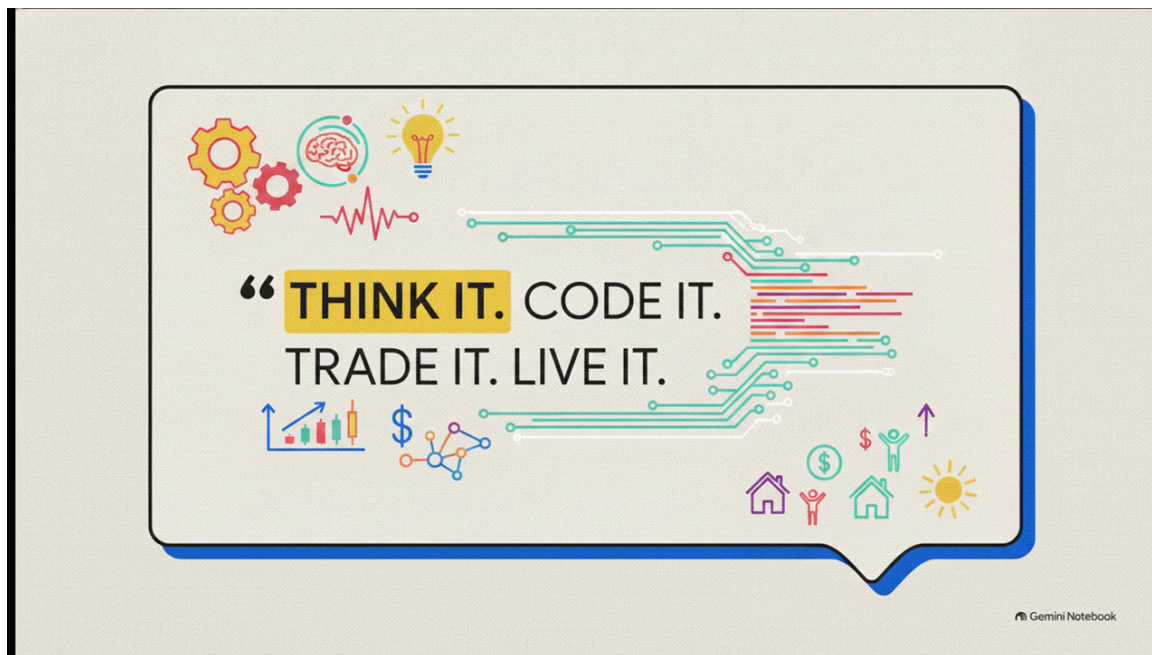

algorithmic trading for beginners

00:13

using a purely systematic approach.

00:15

It all relies on a super structured four-part mantra.

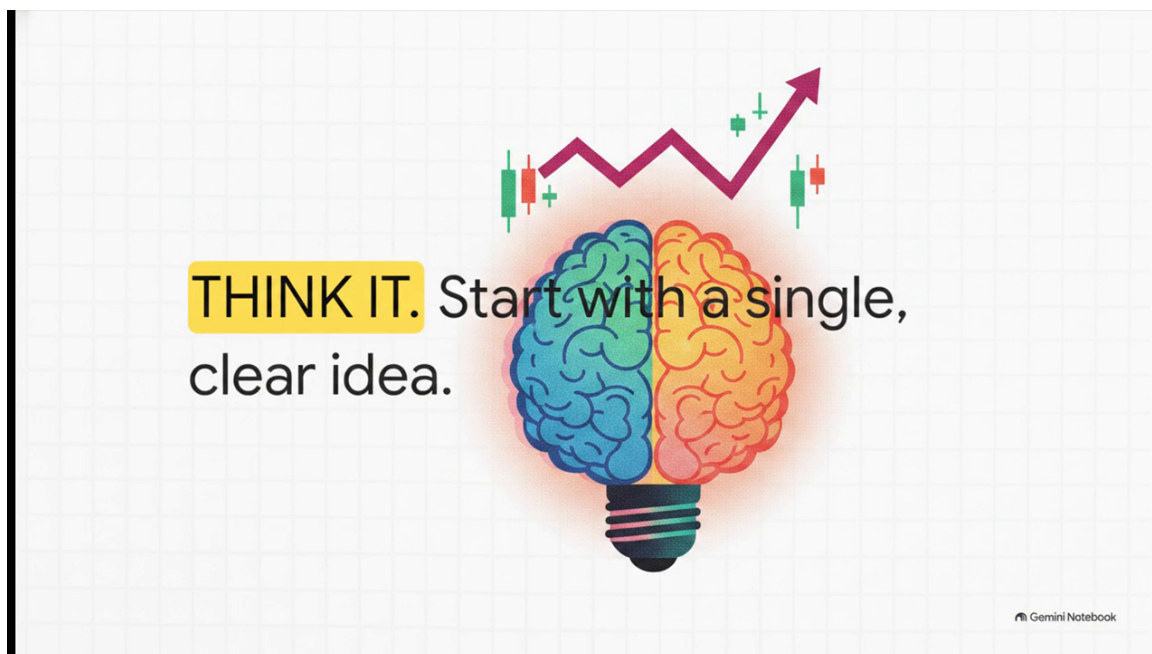

00:19

Think it, code it, trade it, live it.

00:22

First up, think it.

00:24

Before C-Trader executes a single thing,

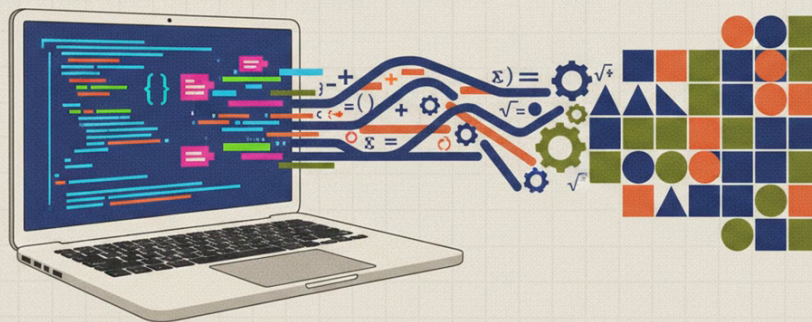

00:26

every system starts with one crystal clear trading idea.

00:30

Next is code it.

CODE IT. Translate ideas into quantifiable rules.

Gemini Notebook

00:30

00:31

You've got to translate that abstract idea

00:33

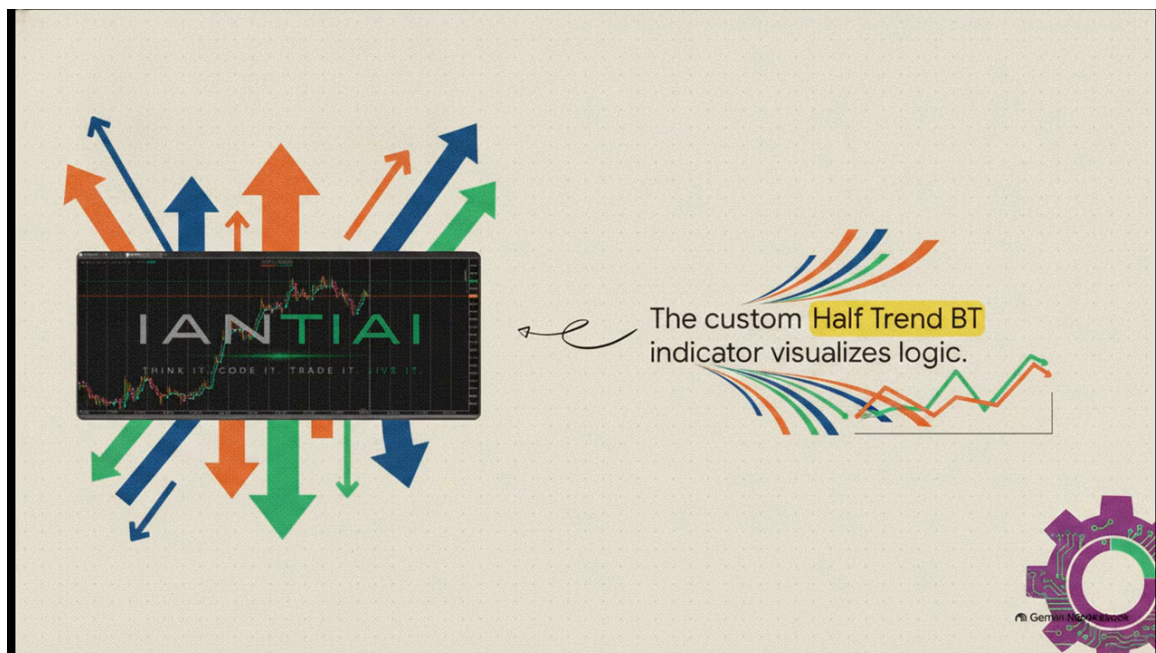

into rigid rules the C-Trader algorithms

00:35

can actually process.

00:37

The custom half-trend BT indicator visualizes this logic,

Gemini Notebook

00:37

00:41

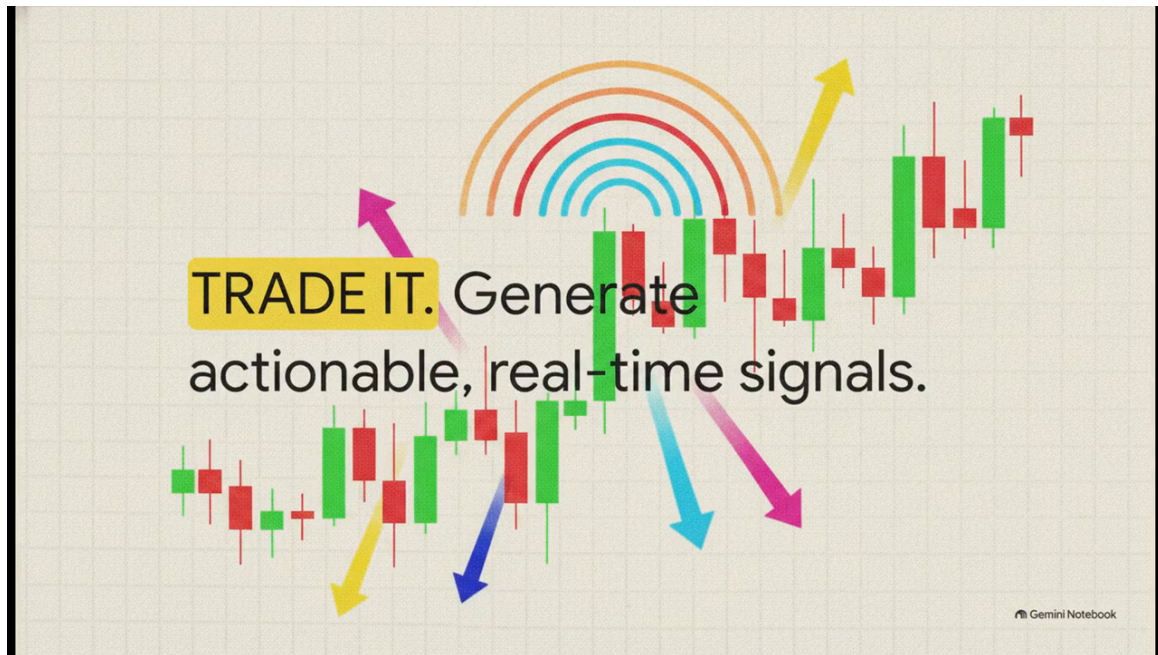

turning complex market data into clear,

00:43

readable algorithmic conditions.

00:46

Then, trade it.

00:46

00:46

This is where C-Trader shines for beginners,

00:48

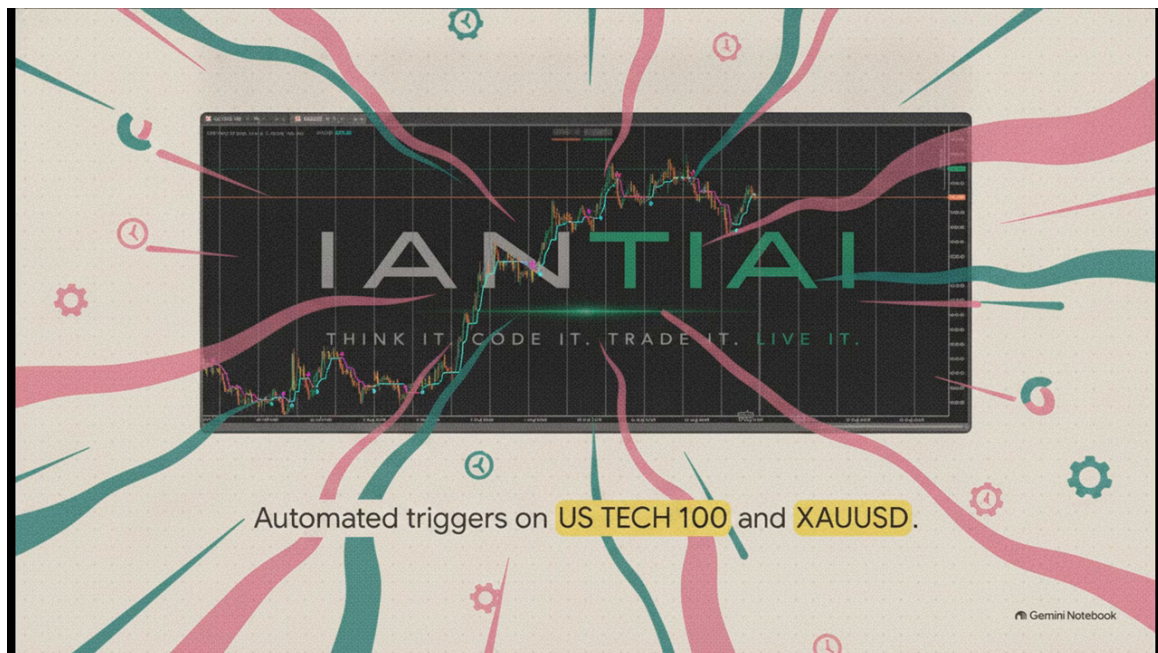

instantly converting those coded signals

00:50

into executed market orders.

00:52

When those pink and cyan trend arrows pop up,

00:52

00:54

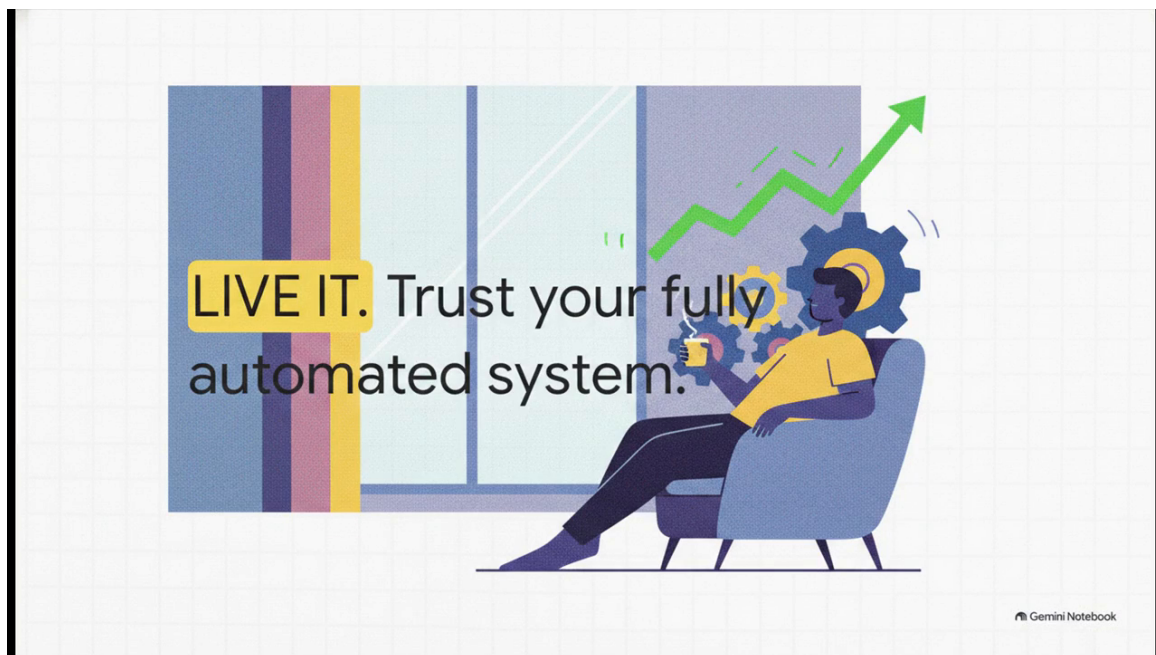

C-Trader's engine automatically triggers

00:56

precise trades with zero hesitation.

00:59

Finally, live it.

00:59

01:00

This is the ultimate outcome,

01:02

trusting your automated system

01:04

to seamlessly execute orders on your behalf.

01:07

It's a seamless pipeline, right?

01:07

01:09

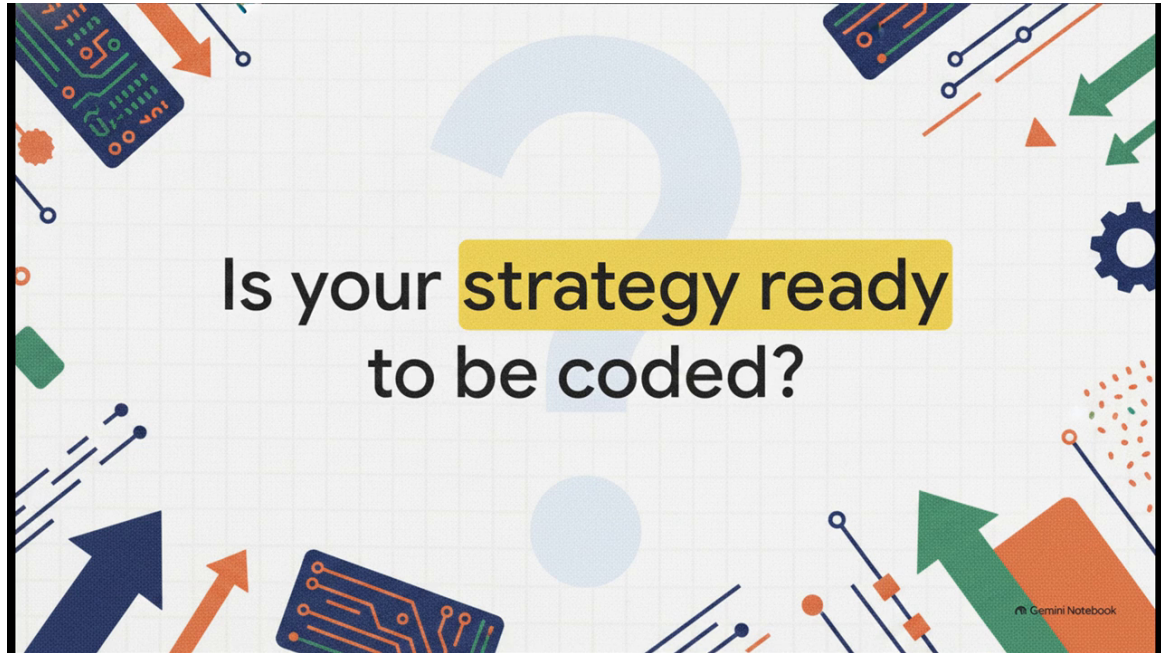

Moving directly from a simple trading thought

01:11

to fully automated C-Trader order execution.

01:14

So here's the million dollar question to leave you with.

01:14

01:16

Is your trading strategy actually ready to be coded?
